

TRAINING GUIDE-LYNX

CSP- PREGATE REGISTRATION MONITOR

This screen monitors all appointments in trouble before the driver arrives to perform his/her move.

Example: when the appointment was created, the import container was cleared to go and before the arrival of the driver, container is put on hold for whatever reason. The information would show on the Pregate registration monitor to inform that the container is no longer available for pick-up

From the **Gate** Menu, click on "**Pregate Registration Monitor**"

The **Pregate Registration Monitor** form will appear.

Pregate Registration Monitor

Home > Gate > Pregate Registration Monitor

*** The below pregate registrations are automatically checked for resolution every 10 minutes.

Pregate Registration #	Date	Time Slot	Type	Status	Driver Id	Truck Co	Line	Equipment #	Booking #	Problem Reason(s) #
------------------------	------	-----------	------	--------	-----------	----------	------	-------------	-----------	---------------------

Notify Me

A job runs on an incremental period which executes a real-time check against the terminal's appointments. If the check results in an error or trouble message, the appointment in question is displayed on this screen with the error message. Additionally, the user who created the appointment in Lynx will receive an email notification informing him/her that the appointment is now encountering errors. This allows users to address any potential errors prior to the driver's arrival.
